CAREER OBJECTIVE

Aspiring Computer Science undergraduate with an interest in building practical and scalable software solutions. Seeking opportunities to apply my skills in programming, machine learning, and backend development while continuously learning and contributing to real-world projects.

EDUCATION

B.E in Computer Science (CSE) [2023-27] The Oxford College of Engineering CGPA: 9.10

TECHNICAL SKILLS

Programming Languages: Python (Intermediate), Java (Basic), C++ (Basic)

Web / UI: HTML, CSS, Streamlit (ML app development)

Backend: Node.js (Basic), Flask (Basic), FastAPI (Basic)

AI/ML: Supervised Learning (basic classification), Data Preprocessing & Feature Handling, Model Training & Evaluation, Computer Vision (OpenCV, face detection), Emotion Classification using Pretrained Models (DeepFace), scikit-learn (Basic)

Cloud: AWS (Academic Basics)

Tools: Git, GitHub

PROJECTS

SAHAJ – Smart Adaptive Highway & Junction (Hackathon Project)

Built a FastAPI-based ML service to predict crowd density and classify severity levels for proactive traffic signal coordination.

Emotion Drift Analyzer | [GitHub](#)

Developed a real-time emotion analysis system using computer vision and pretrained models to track emotional changes over time.

Traffic Analysis System | [GitHub](#)

Built a machine learning model to analyze traffic patterns and classify congestion levels based on input features.

EXPERIENCE

Paid Internship – DNAG Tech (3 Months)

Gained practical exposure to development workflows and contributed to assigned tasks in a team environment.

ACHIEVEMENTS

1st Place – Oxy-Hack 18-Hour Hackathon (The Oxford College of Engineering).

2nd Place – Hackfest (Theme-1) at TATVA'26, BNM Institute of Technology.

Published research paper “A Simplified Approach to Direct AC-AC Matrix Converter Using Verilog HDL for Real-Time Application” in IEEE Xplore (2025).
